Description

Model CHQ-DRC2/M(SCI) is a marine approved Dual Relay Controller designed to provide two general-purpose relay outputs, each output can be driven separately for control of such devices as dampers or for control of plant and equipment shutdown. The monitored input can be used for local power supply fault monitoring or as a general purpose input.

The unit features an integral short-circuit isolator. The module utilises simple DIL switches for reliable addressing. A back box is also available (CHQ-BACKBOX) which, when used in conjunction with the module, increases the IP rating to IP65.
